

Impact Innovation: Research and development projects within Social Action Areas in the program Swedish Metals and Minerals

The offer is part of Swedish Metals & Minerals, a programme within the joint innovation initiative Impact Innovation by the Swedish Energy Agency, Forma and Vinnova. The programme's mission is "To ensure a sustainable and resilient supply of metals and minerals for society's transition". This call for proposals is aimed at research and development projects with a purpose to pave the way for innovations in social sustainability and that have potential to contribute to Swedish Metals & Minerals' mission. The projects financed are expected to strengthen Sweden's conditions within the program's Social Action Areas. The knowledge produced is expected to increase understanding of the challenges within some of the program's Social Action Areas areas and improve the possibilities for dealing with these challenges. The Social Action Areas are described in section 2.2 of the program's scope document, which can be accessed through <https://swedishmetalsandminerals.se/sv/om-oss/>.

Kort om erbjudandet

What can you apply for?

Project with the character of industrial research or experimental development within some of the program's Social Action Areas. The Social Action Areas are described in the program's scope document, link to the page is in section 1 of the call text.

Who can apply?

Consortia with at least three project partners, of which at least one is a Swedish research organization (university, university college or research institute). All project partners must be legal entities.

How much can you apply for?

There is no set maximum grant amount per project, but 6–8 projects are expected to be financed within the call's budget of SEK 25 million. Vinnova's funding may amount to a maximum of 70 percent of the project's total eligible cost.

Call text for the offer

Tip: To create a PDF with all the information about the offer, click Ctrl+P and select PDF to save the content.

. 1 The offer in brief

The offer is part of Impact Innovation-programmet Swedish Metals & Minerals and applies to project that aim to pave the way for innovations aimed at social sustainability with potential to contribute to the program's mission "To ensure a sustainable and resilient metal and mineral supply for societal transformation".

This call for proposals is aimed at research and development projects within one or more of the following focus areas, which are described in more detail in section 2.2 of the program's scope document available at

Scope - Swedish Metals & Minerals: [Länk:
<https://swedishmetalsandminerals.se/sv/scope/>]

2.2.1 Social objective

2.2.2 Skills supply

2.2.3 Education

2.2.8 Internationalisation

2.2.9 Attractiveness

The call for proposals is aimed at consortia consisting of at least three project partners, of which at least one is a Swedish research organisation such as a university, university college or research institute. In addition to research

organisations, the consortia may consist of companies, non-governmental organisations, public organisations, associations, civil society organisations and other relevant actors that have the competence and ability to implement the project. The project participants must be legal entities.

There is no set maximum grant amount per project, but 6-8 projects are expected to be funded within the call's budget of SEK 25 million.

Vinnova's funding may amount to a maximum of 70 percent of the project's total eligible cost.

The project duration may not exceed 36 months and the latest completion date for project implementation is November 17, 2028.

• 2 What do we want to achieve with the offer?

Impact Innovation is Sweden's major innovation initiative to tackle the challenges of our time and the future. In collaborations between private, public and non-profit actors, Impact Innovation meets real technological and societal needs with groundbreaking solutions. On the way to a sustainable and competitive Sweden, attractive to live in for everyone. Together we show what is possible and are ahead of the international competition.

This call for proposals is being implemented within the framework of the Impact Innovation program Swedish Metals & Minerals. The program's mission is "To ensure a sustainable and resilient supply of metals and minerals for societal transformation". This means increasing and securing the supply of metals and minerals while reducing the planetary footprint of extraction and production. The program's background and the areas of focus that are considered central to fulfilling the mission are described in more detail in the program's scope document, which can be found at

[Scope - Swedish Metals & Minerals \[Länk:
https://swedishmetalsandminerals.se/sv/scope/\]](https://swedishmetalsandminerals.se/sv/scope/)

.

The offer applies to research and development projects that strengthen Sweden's capabilities in the social areas of intervention ("Social Action Areas") which, according to section 4, is covered by the call for proposals. The knowledge produced is expected to increase understanding of, and improve the possibilities for handling, challenges in the current social areas of intervention.

Project applications are expected to be based on an analysis of potential of the project idea, including assessment of development needs, benefits, sustainability and risks. The analysis may, but does not have to, be the result of a feasibility study within Swedish Metals & Minerals.

Creating the best possible conditions for social innovation requires engagement, including from actors not normally active in the mining and metals industry. Therefore, project proposals that address issues that engage a broad range of stakeholders in new or expanded collaborations are encouraged.

Contribute to a sustainable system transformation

Impact Innovation will contribute to global competitiveness through transition to sustainable development in line with the UN's global sustainability goals, defined in Agenda 2030. For Swedish Metals & Minerals, this is expressed through the program's mission, which reads "To ensure a sustainable and resilient metal and mineral supply for society's transition". This means increasing and securing the supply of metals and minerals while reducing the planetary footprint of extraction and production.

Vinnova prioritizes two perspectives in Agenda 2030: gender equality and climate transition. Initiatives and project that Vinnova funds are assessed based on how they contribute to these perspectives.

In this call for proposals we primarily assess the gender equality perspective through:

- If women and men participate in the project on an equal footing, receive contributions and have influence and power over the project.
- How well the project analyzes and takes a position on whether there are sex or gender aspects that are relevant to the project's problem formulation, solutions and effects.

Gender-equal innovation – what it means for those seeking funding from us

[Länk:

<https://vinnova.se/link/941c8ea1fc2647cdbbaab205bf7b6e1c.aspx>]

Agenda 2030 as a driver for innovation

[Länk:

<https://vinnova.se/link/b1cf02a702f444208964eee48e8e5cbb.aspx>]

Making scientific publications and results available

When results from research and innovation are made freely available, more people can contribute to solving societal challenges. This the call for proposals will help make results available to everyone. Therefore, all scientific publishing should be open access.

• 3 Who is the call for proposals aimed at?

The call for proposals is aimed at consortia consisting of at least three project partners, of which at least one is a Swedish research organisation such as a university, university college or research institute. In addition to research organisations, the consortia may include companies, non-governmental organisations, public organisations, associations, civil society organisations and other relevant actors that have the competence and ability to implement the project. The project partners must be legal entities.

Participant seeking funding must be Swedish legal entities. In this respect, a Swedish legal entity is considered to be a foreign organization that has a branch or establishment in Sweden. The costs in the project must then be attributable to activities of the branch or establishment. Foreign actors who do not have a branch or establishment in Sweden can be project participants without funding from Vinnova.

• 4 What do we finance?

This call for proposals concerns funding of research and development projects that contribute to the program's mission by addressing one or more of the following social action areas according to section 2.2 of the program's scope document available at

Scope - Swedish Metals & Minerals [Länk:
<https://swedishmetalsandminerals.se/sv/scope/>

:

2.2.1 Social objective

2.2.2 Skills supply

2.2.3 Education

2.2.8 Internationalisation

2.2.9 Attractiveness

All project must also comply with Vinnova's description of what characterizes "social innovation" according to the green box on page 5 of

the brochure "Social innovation" which can be read at Social innovation

[Länk:

<https://vinnova.se/link/d5751f0cf020446d8f5b14aa13743d37.aspx>]

The projects must have the character of industrial research or experimental development as defined in Article 25 of the EU Commission Regulation (651/2014) on General Block Exemption (GBER). This applies to the focus and content of the projects regardless of whether the Regulation applies to the participation of individual project parties.

Within the framework of the call for proposals we therefore do not finance:

- routine or recurring changes to existing goods, production lines, manufacturing processes, services or other ongoing operations. This applies even if the changes may involve improvements
- courses, marketing, sales, regular business development, ongoing operations, quality assurance, certification or equivalent (for example CE marking), investment in equipment or tools, and intellectual property strategies and protection
- implementation and adaptation of established solutions and methods in expanded contexts, if this is not associated with the development of new or improved products, processes or services

For brief descriptions of industrial research and experimental development, see section 5. For a full definition, see [funding bases and levels](#)

What costs can Vinnova finance?

Vinnova's funding is covered by state aid rules. The rules govern what types of costs can be financed. These are called eligible costs.

In this the call for proposals these types of costs are eligible:

- **Personnel costs:** Salaries, social security contributions and other personnel costs.
- **Equipment, land and buildings:** Instruments, equipment and rent for premises other than regular business premises.

- **Consulting and licensing costs:** Consulting services, knowledge and patents purchased or used under license from an external party. Costs for consulting services from external parties may constitute a maximum of 20 percent of a project party's budget. Exceptionally, we may accept a higher proportion than 20 percent in the event of special needs. You must then describe the consulting efforts in detail in proposal and clearly justify the need for them. The description and justification are taken into account in the assessment of proposal.
- **Other direct costs:** For example, materials, supplies and travel necessary to carry out the project.
- **Indirect costs (overhead):** Costs that are not incurred as an immediate consequence of but can be related to the project, such as regular premises and cleaning. A project party's indirect costs may constitute a maximum of 30 percent of the project party's personnel costs. Universities, university colleges, and certain research organizations and government agencies have higher maximum limits depending on the type of activities.

For a full description of these types of costs, see [Instructions for eligible costs](#)

What eligibility requirements apply to costs in project financed by Vinnova?

For a cost to be eligible, it must be:

- necessary for the activities in the project
- recorded correctly and separately from the organization's other costs

An organization may not claim someone else's costs as its own.

For more detailed information on which eligibility requirements, limitations and exceptions apply, see [Instructions for eligible costs](#)

5 How much funding do we provide?

The state aid rules govern how much of the costs we can finance. This is determined individually for each organization. We therefore differentiate between how much funding the project can receive, and how much each participant can receive.

How much funding can the project receive?

There is no set maximum grant amount per project, but 6-8 projects are expected to be funded within the call's budget of SEK 25 million.

Vinnova's funding may amount to a maximum of 70 percent of the project's total eligible cost.

How much funding can a participant receive?

How much funding a participant can receive depends mainly on:

- which activities the project partner will carry out in the project
- project party size and activities

An organization that offers some kind of service or product on a market is considered to be engaged in economic activities. It does not matter how the organization is financed, whether it is public or private, or whether it has a profit motive. It also does not matter what legal form the business has. For example, whether it is a limited liability company, a trading company, an economic association, a non-profit association or a foundation.

Contact call manager if you are unsure whether an organization in your project is conducting economic activities. However, the organization itself is responsible for assessing whether it is conducting economic activities.

In this the call for proposals we use the following criteria:

- Not state aid. To organizations that do not participate in the project with economic activities.
- De minimis Support, also known as de minimis support, in accordance with the EU Commission Regulation (2023/2831) on de minimis support
- Support for industrial research in accordance with Article 25 of the EU Commission Regulation (651/2014) on General Block Exemption (GBER)
- Support for experimental development in accordance with Article 25 of the EU Commission Regulation (651/2014) on General Block Exemption (GBER)

These four bases of support are described in more detail below.

Not state aid

This support basis can only be used for funding to organisations that do not engage in economic activities. This usually includes universities and university colleges,

research institutes that engage in non-economic activities and other organisations that do not offer a service or product on a market. We can finance up to 100 percent of the costs of such an organisation.

Support of minor importance, also known as de minimis support

This form of support can be used for funding to organizations that conduct economic activities. Through support of minor importance, we can finance up to 100 percent of a project party's costs.

An organization can receive a maximum of 300,000 euros over a three-year period in this form of support, regardless of the funder and project. This means that if the same organization has previously received support of lesser importance from Vinnova or other funders, this will affect how large the support can be in this the call for proposals.

Please submit a certificate of minor support when you submit proposal. This is required for us to be able to grant this support.

Certificate of Minor support

[Länk:

<https://vinnova.se/link/4527bad3be4145a596dab3cf95935ce8.aspx>]

We grant funding in accordance with the EU Commission Regulation (2023/2831) on de minimis support.

Support for industrial research and experimental development

These support bases are used for funding organizations that conduct economic activities.

What is industrial research and experimental development?

Industrial research can be simply described as seeking new knowledge through planned research or critical analysis to develop or significantly improve products, processes or services.

Experimental development can be simply described as combining, shaping and using existing knowledge to develop new or improved products, processes or services.

For full definitions, see [funding bases and levels](#)

How much of the costs can we finance?

The size of the organization and type of activity determines how large a proportion of the costs we can finance, i.e. the maximum level of support.

For industrial research and experimental development, these maximum support levels apply:

| Activity | Small business | Medium-sized business | Large company |
|----------------------------------------------------------------------------------------------------------------------------|----------------|-----------------------|---------------|
| Industrial research | 70% | 60% | 50% |
| Industrial research If the project is covered by any of the bonus bases. See what is meant by bonus base below. | 80% | 75% | 65% |
| Experimental development | 45% | 35% | 25% |
| Experimental development If the project is covered by any of the bonus bases. See what is meant by bonus base below. | 60% | 50% | 40% |

Hur EU defines small and medium-sized enterprises as stated in [the User Guide on the definition of SMEs which you can find here](#)

Bonus Basics

If the project is covered by a bonus basis, we can finance a higher proportion of the costs according to the table above. Examples of bonus bases are:

- **Actual cooperation:** Some level of cooperation between small and larger companies, between companies in two different European countries or between research organisations and companies

- **Dissemination of results:** Extensive dissemination through, for example, conferences or open databases.

For complete information about these and other bonus bases, see [funding bases and support levels](#)

We grant funding in accordance with Article 25 of the EU Commission Regulation (651/2014) on General Block Exemption (GBER).

• **6 What basic requirements apply for us to assess your proposal?**

In order for us to take a position on and assess your proposal, it must meet certain formal eligibility requirements. If the requirements are not met, proposal will be rejected immediately.

Eligibility requirements for project consortium composition

- The applicant consortium contains at least three project partners, of which at least one is a Swedish research organization such as a university, university college or research institute. Different workplaces or workplaces within an organization, for example different departments at a university, are counted as one participant as they constitute the same legal entity.

Eligibility requirements on organizational form of project partners

- All project parties must be legal entities. Natural persons or individual companies cannot participate as project parties.
- The coordinating project party must be a Swedish legal entity and conduct activities in Sweden.
- The project parties seeking funding from Vinnova are either Swedish legal entities or foreign organizations that have a branch or operating location in Sweden and where the costs in the project are attributable to the branch's or operating location's activities.

Eligibility requirements for project

- The project must not have begun before proposal is submitted.

Eligibility requirements on proposal

- Proposal must be written in Swedish or English.
- Proposal must follow the instructions given in section 9.

- Proposal must contain all attachments requested in section 9.
- Proposal should not contain attachments beyond those requested in section 9.
- The appendices must be written on the templates provided, meet formatting requirements and not exceed the maximum number of pages according to section 9.
- Letters of intent from all project parties must be attached, completed in full and signed by an authorized person. Research organizations must also submit a letter of intent.

• 7 How is the assessment done?

What do we assess?

Potential

- It is credibly demonstrated that the project addresses one or more of the social areas of intervention in section 2.2 of Swedish Metals & Minerals' scope document [[Länk: https://swedishmetalsandminerals.se/sv/scope/](https://swedishmetalsandminerals.se/sv/scope/)], which according to section 4 of this the call text are covered by the call for proposals and that the project is consistent with Vinnova's description of what characterizes "social innovation".
- proposal clearly states what the project is expected to result in and deliver, and how the project's expected results will contribute to Swedish Metals & Minerals' mission according to the scope document [[Länk: https://swedishmetalsandminerals.se/sv/scope/](https://swedishmetalsandminerals.se/sv/scope/)]. The assessment includes how well the project proposal analyzes gender equality aspects and the project's potential to contribute to increased gender equality and objective according to Agenda 2030, taking into account aspects that are current and relevant within the social action area(s) that the project addresses.
- proposal clearly shows how the project contributes new knowledge or improved methods, such as solutions, approaches or working methods, compared to any previous attempts to address the same or similar issues.
- How well proposal describes what the next step is after a successful project and how the project plans to adapt the deliveries in relation to the organizations (within or outside the current project consortium) that are expected to be able to take this step.

Actors

- The project consortium's conditions for implementing the project and ensuring the use and exploitation of the project's results.
- The extent to which proposal credibly demonstrates that the competencies required for successful implementation of the project are available, either directly in the project consortium or indirectly accessible via, for example, project partners, specified consultants or a reference group for the project.
- How well balanced the project group is in terms of gender distribution and the distribution of power and influence between women and men.
- How well consulting services are described and the need for consulting services is justified for any project parties whose budget contains more than 20 percent consulting costs.

Feasibility

- The extent to which the project description contains clear objective and deliverables that respond to the project's issues, are follow-upable and can be achieved through the project's implementation.
- To what extent does the project description show that the project's time and activity plan:
 - contains activities that comply with the definitions of industrial research or experimental development (see section 5).
 - is appropriate in terms of the project's objective and ambitions.
 - is logical and reasonable in terms of available resources such as budget, expertise, equipment, project time, etc. in relation to what is to be done.
- How well proposal identifies the risks involved in the implementation and describes an appropriate plan for managing them.
- How well the project proposal integrates gender equality aspects into the project plan.

How do we assess?

The project selection is handled by Vinnova in a process where applications that meet the formal requirements in section 6 compete with each other for the call's budget.

Applications that meet the formal requirements according to section 6 are assessed in relation to the above assessment criteria by external evaluator. The evaluators

are appointed by Vinnova and work under a duty of confidentiality and professional secrecy. The assessment is based on the electronic proposal submitted via Vinnova's e-service. See section 9 for more information.

The external assessors' combined assessment results in a recommendation to Vinnova. Based on the assessors' recommendation and Vinnova's assessment of financial status (see below), we make a decision on which applications are granted funding and which are rejected. Our decision cannot be appealed.

We also assess financial status

Before deciding on funding, we also conduct a comprehensive assessment of the organizational and financial status of those receiving funding. We use information we obtain from credit reports, currently from Dun & Bradstreet.

In order for us to grant funding this applies:

- Organizations seeking funding for personnel costs must be registered as employers with the Swedish Tax Agency. This also applies to organizations that budget for personnel costs but do not seek funding from Vinnova.
- Organizations must not be insolvent, in liquidation or in corporate restructuring, nor must they have any significant unpaid debts with the Swedish Enforcement Authority.
- Limited liability companies must not have used up half or more of their share capital.
- SMEs must be able to demonstrate, upon request, that they have the financial capacity to implement the project according to their budget in proposal. They cannot use public funding or their own funds intended for other project to cover project costs in this call for proposals.

8 What happens when we have decided on your proposal?

When the selection process is complete and Vinnova has made a decision to either grant or reject your proposal, Vinnova will notify the coordinating project party of the decision. The Swedish Metals & Minerals Program Office will be informed of the outcome. Our decision cannot be appealed.

In decisions about an approved proposal, we state how much funding each party in the project is granted.

What happens if you are granted funding?

If we grant your proposal, you must follow our general terms and conditions for funding. The terms include, among other things:

- That you will sign a special document in which you approve your participation and commit to carrying out the project.
- That you report how things are going, your costs and achieved results to us regularly during the project period.
- If you are multiple parties, you must agree on your mutual rights and obligations in the project in an agreement. It can take time to get a project agreement in place, so it is a good idea to get this in place before the project starts.

See our general terms and conditions and get help understanding and fulfilling them

[Länk:

<https://vinnova.se/link/bb85799ded6e400880ff7d2bd447ac3a.aspx>]

You also need to follow the special conditions that apply to this the call for proposals:

- The project must be represented by at least one participant at the conferences and other activities organized within the program, approximately one to two times per year. The costs for such participation are eligible for support.
- The project shall, during the duration of the project, participate in and maintain a continuous dialogue with the program office for Swedish Metals & Minerals. This includes separate reporting to the program office during the project's implementation, and the project being assigned a contact person at the program office who assists the project and monitors it on behalf of the program.
- Instead of paragraph 7.3 of General terms and conditions the following applies: When communicating about the project and when publishing project results, it must be stated that the work was carried out with financial support from the Impact Innovation program Swedish Metals & Minerals – an initiative of the Swedish Energy Agency, Formas and Vinnova. Publication refers to, for example, publication, regardless of medium, and oral presentations.
- When reporting the project, a summary of the project results must be uploaded as an attachment to the final report to Vinnova. The summary must also be sent to the program office for Swedish Metals & Minerals via email

programkontor@swedishmetalsandminerals.se

[Länk:

. The

[https://vinnova.se/mailto:programkontor@swedishmetalsandminerals.se\]](https://vinnova.se/mailto:programkontor@swedishmetalsandminerals.se)

summary must follow the template that will be available at

www.impactinnovation.se [Länk: <http://www.impactinnovation.se>]. This

summary must be freely distributed and published on the websites of the Swedish Energy Agency, Forma, Vinnova, Impact Innovations and Swedish Metals & Minerals and must therefore not contain confidential or otherwise sensitive information.

We may also decide to add supplementary special conditions for individual project. In such cases, they will be stated in the decision.

Could you have to pay back funding?

If you do not follow our term, you may be required to repay the amount. This also applies if you have been granted funding incorrectly or for an amount that is too high.

• 9 How do I apply?

To apply for funding you fill out a proposal in Vinnova's e-service.

Questions and answers about Vinnova's e-services [Länk:

[https://etjanster.vinnova.se/public/fragor-och-svar\]](https://etjanster.vinnova.se/public/fragor-och-svar)

contain answers to many questions about the e-service.

The application form asks for information about the project, participating project partners and budget. **You should also attach these attachments to proposal:**

- **Project description** according to the project description template downloaded from the call's website. The project description may not exceed 12 portrait A4 pages and must be written in Swedish or English with 11-point black text. References to information on websites and the like will not be taken into account in assessment.
- **CV attachment** (one A4 page per person) according to the template downloaded from the call's website. It should contain CVs relevant to the project for all people identified as key people in the project description.
- **Letters of intent** according to the template downloaded from the call's website. Each participant must submit a letter of intent signed by a person who is authorized to sign agreements on research and innovation projects on behalf of the organization in question. The signed letters of intent are scanned and uploaded to

the e-service. Please note that research organizations must also submit a letter of intent.

- **Certificate of support of minor importance** from project parties seeking such support. Certificate form is available from

[Certificate of support of minor importance.](#)

[Länk:

<https://vinnova.se/link/4527bad3be4145a596dab3cf95935ce8.aspx>]

- **Reference list** where you can refer to published material.

All appendices are mandatory, except the reference list.

At the same time as proposal is sent to Vinnova, a non-confidential summary of the project description must be sent to the program office for Swedish Metals & Minerals via e-mail

programkontor@swedishmetalsandminerals.se

[Länk:

<https://vinnova.semailto:programkontor@swedishmetalsandminerals.se>]

. The

summary must follow a template downloaded from the call's website and can be freely distributed and published. It must therefore not contain confidential or otherwise sensitive information.

Start proposal well in advance

Keep in mind that it takes time to make a proposal. Filling out templates can take several days, as it is based on the analyses you will do.

In our e-service you can start filling in the details and then continue at a later time. You can also distribute permissions to others who you want to contribute to proposal. When proposal is complete, mark it as done.

You can unlock proposal and make changes at any time, right up until the last application date. If you unlock proposal, you must then mark it as ready for it to be registered when the call for proposals closes.

• **10 What happens when the call for proposals closes?**

When the call for proposals closes, your proposal will be registered as. We will then send an email confirmation to the person responsible for the user account in the e-service as well as to the project manager and the signatory of the coordinating project party. Please contact us if you have not received a confirmation within 24 hours of the call for proposals closing.

Once the call for proposals is closed, you cannot change anything in proposal. You can only make additions if we ask you to.

Who can read your proposal?

Your proposal will be read by Vinnova employees and the external evaluator participating in this the call for proposals. Everyone works under a duty of confidentiality.

Applications submitted to Vinnova become public documents. This means that we must disclose them if requested. However, we classify information that we believe could cause financial harm to the individual if disclosed. This could, for example, include information about business and operational conditions, inventions or research results.

How we handle public documents and confidentiality

[Länk:

<https://vinnova.se/link/1be94e9f4ce84b809ec46ba335446ff1.aspx>]

How to apply

To apply for funding, you need to log in and complete an application form in our eServices portal. The application form contains questions about your project, the participants taking part in the project and your budget.

How to apply for funding

[Länk: <https://vinnova.se/en/apply-for-funding/>]

This happens when the call for proposals is closed.

Once your proposal has been registered, we will email a confirmation to the person responsible for the user account, as well as the project manager and the signatory. This may take a few hours after the call for proposals closes. If you have not received a confirmation within 24 hours of the call for proposals closing, please contact us.

Once the call for proposals is closed, you cannot change or fill in any new information. You can only supplement your proposal if we ask you to.

Who can read your proposal?

Applications submitted to us become public documents. However, we do not disclose information about the company's operations, inventions or research results if it can be assumed that someone will suffer financial damage if the information is disclosed.

This means that we must disclose the documents if someone requests them. However, we keep confidential the information that we believe could cause financial damage if disclosed.

How we handle public documents and confidentiality
